Case Study Vensur

Tramigo system has done its wonders again in enhancing fleet management and providing added security to Vensur in Suriname, South America.

Vensur has been the producer of high-quality cement for the building industry, renovation and civil engineering in Suriname for over 40 years. The company supplies the best quality cement to over 300 customers in Suriname. Vensur has a total of over 60 employees and is constantly investing in the rehabilitation and modernization of the production facilities and cement transportation fleet.

The company has chosen Tramigo T22 devices and M1Fleet software to monitor its fleet of trucks distributing cement and cement products. Our system was just the perfect solution in fulfilling Vensur's primary need in finding a secure and cost-efficient solution in order to get a more efficient management of the distribution fleet.

Tramigo system also increases the efficiency in dispatching of the trucks as the location of each truck is known at all times which enables the closest available truck to be used. In addition to fleet management, Vensur also uses one Portable Tracking Device for added security which is used by individuals when traveling.

Tramigo T22 devices are easy to install and come equipped with local Landmark Data (TLD) especially designed for each country. The free fleet management software, M1Fleet, that is downloadable from Tramigo's website is available in several languages and the only cost for fleet tracking lies in SMS text messages.

With Tramigo's solution, Vensur is able to monitor the entire fleet without any fixed monthly fees or annual monitoring contracts! Tramigo T22 tracking device is the market's leading tracking products from Finland that provides Total Fleet Control and added security.

Please contact Tramigo sales department (sales@tramigo.com) for more information to find out how we can provide the optimal monitoring and security solution for your company and fleet!

T22 Key Benefits for Fleets:

Tramigo T22 helps Vensur to better manage its fleet and brings added security for the drivers

- More efficient Fleet Management with M1Fleet software
- Enhanced truck dispatching as location is known at all times
- Total privacy, location only know by the company as no 3rd party access to location information
- Easy set-up of system, no licenses or contracts!
- Remote listening and emergency GSM voice communication
- Reports position in accurate GPS coordinates in addition to landmark location
- No monthly monitoring or annual subscription fees, huge savings!
- Free software for PC and mobile phones, including Blackberry smartphones and Android tablets!
